

30 November 2006

Mr. Peter Brodsgaard
Vice President of Business Development
EvolveWare Inc.
3375 Scott Blvd., Bldg. 330
Santa Clara, CA 95054

Dear Mr. Brodsgaard,

This letter summarizes the value we received from one of EvolveWare's products - Legacy Rejuvenator COBOL Documentation Tool. Our task was to discover the business rules implemented within a significant IBM z/OS mainframe application. Experience indicated that to isolate the programming logic manually would take too much programmer time on the part of our consultants familiar with the COBOL language and its programming style. In order to get this job done sooner we enlisted your services to use your Legacy Rejuvenator COBOL Documentation Tool to process approximately 500,000 lines of COBOL and extract and document the logic in these programs.

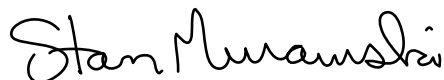

- This work was done at a Microsoft Technology Center where EvolveWare set up the tool in a few hours time. Initial processing of the entire code set was accomplished in about 18 elapsed hours and in the initial runs about 80% of the code was processed and 20% ignored. We saw value in the output and after your staff added S2T patterns to recognize COBOL usage not previously encountered, all of the programs were processed meeting EvolveWare's guarantee of 100% automated documentation.
- The quality of the output report generated by the tool met our expectations and the S2T reports gave us the possibility to quickly drill down into programs and find the programming logic and see its flow.
- The EvolveWare COBOL Documentation reports saved a significant amount of time. The scanner was able to parse all the COBOL source and copybooks and build a repository in a searchable manner of information that would otherwise have been a static presentation on paper.
- The scanner was more thorough than a human review can be. There is no assurance a manual approach won't miss important things. Instead of a manual code review and discovery, the scanner with its built in intelligence reviewed the source code, performed impact analysis and identified snippets of code that affect the manner in which data flows through the system.
- EvolveWare's COBOL Documentation Tool produced reports from which can be gleaned an understanding of the current system. This documentation is presented in a manner that the current development staff understands, e.g., with the current program and data names, which increases its impact and effectiveness.

The value of what we received was enhanced by the level of service provided by the EvolveWare staff that was made the extra effort to get the job done on time. In addition, EvolveWare delivered in a few days' elapsed time enhancements that we requested to improve the usability of the scripted HTML page based S2T reports.

You have also shown us that in addition to documenting COBOL programs, your Legacy Rejuvenator COBOL-2-.Net product can also translate the code into VB.NET or C#. We look forward to an opportunity where we might use your services and/or technology to attack that challenge.

Sincerely,

Stanley John Murawski

Architect Consultant, Microsoft Services
